

# FLOATING RATE HIGH INCOME FUND

May 31, 2026

## INVESTMENT PHILOSOPHY

The investment strategy is to seek to maximize risk-adjusted returns by investing in primarily first lien, senior secured, floating rate bank loans of non-investment grade (i.e., high yield) companies. The Shenkman Capital Floating Rate High Income Fund employs a conservative approach which focuses on principal preservation. Portfolios are well diversified across issue, issuer, and industry.

## FUND OBJECTIVE

- The Shenkman Capital Floating Rate High Income Fund seeks a high level of current income.

## WHY SHENKMAN FOR SENIOR SECURED LOAN INVESTING

- Loan & Bond Expertise:** David Lerner's 20+ years of dedicated leveraged loan experience combined with the clout of a \$38.1 billion\* high yield platform facilitates strong capital market relationships that enable us to source paper, garner additional access to company management and work closely with our research coverage.
- Prudent Investment Philosophy:** As a firm, Shenkman focuses first and foremost on identifying money good credits, a key element of success in this asset class.
- Depth of Research Team:** The quality of Shenkman's 24 member credit research team allows our bank loan portfolio managers to feel confident seeking out price anomalies and relative value trades.
- Mandatory Management Contact:** We believe the significant overlap between Bond and Loan issuers is a key strength for Shenkman as we often have had a meaningful dialogue that can include one-on-one meetings, a rarity for loan-only managers.
- Track Record Through Many Market Cycles:** While there are many bank loan strategies, Shenkman Capital is one of a few managers with a track record dating back to 1998.

\*The Shenkman Group of Companies AUM represents \$35.5bn managed by Shenkman Capital Management Inc. and \$2.8bn managed by Romark Credit Advisors LP and its relying advisors. Assets managed by Shenkman Capital Management, Inc. that are invested in securitization vehicles managed by Romark Credit Advisors LP are included the AUM of both companies, but are included only once when calculating the AUM of the Shenkman Group. AUM calculations include uncalled commitments and gross assets of securitization vehicles. See disclaimers for additional important information on the Shenkman Group of Companies.

<sup>^</sup>The adviser has contractually agreed to waive a portion of the fund expenses through January 27, 2027.

## MONTHLY COMMENTARY

May marked a continued recovery in risk sentiment as investors appeared to look through lingering geopolitical uncertainty and focused on improving fundamentals. Signs of progress in U.S.-Iran negotiations helped ease concerns around energy markets, while solid corporate earnings, resilient economic data, and steady fund inflows supported risk appetite. Equities rallied sharply, with the S&P 500 gaining more than 5%, and high yield spreads tightened to a four-month low as investors grew more comfortable with the macro backdrop. Beneath the surface, however, dispersion remained evident, with lower-quality credits lagging and CCC spreads widening even as the broader market strengthened.

The leveraged loan market, as measured by the Morningstar LSTA US Leveraged Loan Index, returned 0.51% in May. For context, high yield bonds, investment grade bonds, and U.S. Treasuries, as measured by the ICE BofA US High Yield Index (H0A0), ICE BofA Corporate Index (C0A0), and ICE BofA Current 10-year Treasury Index (GA10), posted returns of 0.49%, 0.71%, and 0.01%, respectively.

Returns by rating showed a notable quality bias in favor of higher-rated loans in May as BB and B rated loans rose 0.48% and 0.59%, respectively, while CCC & below rated loans returned -0.44%. The top performing industries in the Index included IT Services and Entertainment, while the performance laggards included Media and Building Products. Primary leveraged loan market activity rose to a four-month high in May with \$108.1 billion coming to market. From a demand standpoint, gross collateralized loan obligation (CLO) formations hit a seven-month zenith of \$54.4 billion (\$18.4 billion net of reset/refinancing). There were no loan issuer defaults in May, and the J.P. Morgan 12-month par-weighted leveraged loan default rate decreased 16 basis points (bps) to 1.28%.

The leveraged finance markets built on April's recovery during May, supported by improving risk sentiment, strong equity market performance, and continued demand for credit. Constructive earnings results and resilient economic data helped drive spread tightening and positive returns across most market segments. Primary markets remained healthy and refinancing activity continued to support balance sheet management and maturity extension efforts. We expect carry to remain the dominant return driver through 2026, supported by attractive all-in yields and a generally favorable default backdrop. However, persistent macro uncertainty, evolving Fed expectations, and geopolitical developments may continue to spur periodic volatility. Dispersion across ratings, sectors, and individual issuers remains elevated, which we believe reinforces the importance of disciplined credit selection and fundamental underwriting.

**Mutual fund investing involves risk. Principal loss is possible. There can be no assurance that the Fund will achieve its stated objective. In addition to the normal risks associated with investing, bonds and bank loans, and the funds that invest in them are subject to interest rate risk and can be expected to decline in value as interest rates rise. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Diversification does not assure a profit, nor does it protect against a loss in a declining market. The SEC does not endorse, indemnify, approve nor disapprove of any security.**

The Fund invests in foreign securities which involve political, economic and currency risks, greater volatility and differences in accounting methods. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Leverage may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the fund to be more volatile than if leverage was not used. Investments in CLOs carry additional risks, including the possibility that distributions from collateral securities will not be adequate to make interest payments and that the quality of the collateral may decline in value or default.

The indices mentioned are unmanaged, not available for direct investment and do not reflect deductions for fees or expenses.
